4. Progress of the Project

During the first months of my first year, I did a literature review concerning my research question. Based on the literature review, we decided to design an experimental task that is necessary for our study with a free tool called Psytoolkit. Writing the script for the experiment took 2 months. We collected data from participants that we recruited from Prolific.co for our first pilot study. After scoring the answers, we moved on to our second pilot study. Conducting literature review, and designing our second script took about two months. After completing the script of the second study, we collected data from participants via Prolific.co. After collecting and scoring the data, we analysed the results. Based on our results, we decided to conduct a new study with important changes in the design. The new study will be conducted in the second year.

5. Expenses made with the 10% fund:

1.058,68 Euro was spent to recruit participants from Prolific.co
